Heroes of Feonora Loot Die

Did You Know?

In the world of mathematics these shapes are known as Polyhedra, which are three dimensional Polygons.
The (d6) is a Cube, the (d8) is an Octahedron and the (d12) is a Dodecahedron.
All three are members of the Platonic Solids group.
The flattened arrangements you see here are called "Nets."

In the world of Roleplaying Games these kinds of dice are called "Polyhedral dice" and traditionally come in a wide variety of shapes, sizes and color patterns.

The word "Dice" is technically reserved for the plural form (or, multiple dice).
The proper way to refer to a single one of these is "Die."
For example, one can roll a pair of Dice, or one can roll a single Die.

In Heroes of Feonora these are simply referred to as "Player Dice"

...Although, some of the Hauflins have taken to calling them 'Numbered Wiffle Blocks.' A few Dwarves have been known to have an uncanny knack for rolling high numbers when needed, but we don't recommend suggesting the possibility of foul play. Just nod and agree that it's a matter of [skill] in how the dice are thrown...and keep a close eye on those bets.

This Loot die here...that is a Truncated Cube
