

# Heroes of Feonora Loot die

## Did You Know?

In the world of mathematics these shapes are known as Polyhedra, which are three dimensional Polygons. The (d6) is a Cube, the (d8) is an Octahedron and the (d12) is a Dodecahedron.

All three are members of the Platonic Solids group.

The flattened arrangements you see here are called “Nets”

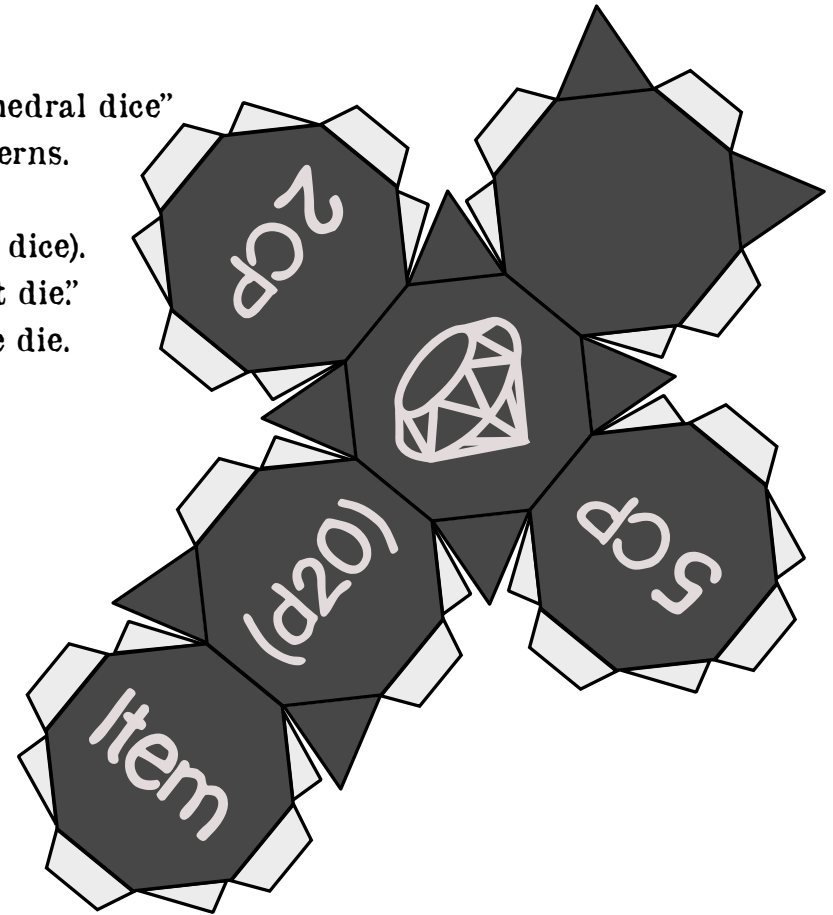

In the world of Roleplaying Games these kinds of dice are called “Polyhedral dice” and traditionally come in a wide variety of shapes, sizes and color patterns.

The word “Dice” is technically reserved for the plural form (or, multiple dice). When referring to a single one would say “Die” as in, “now roll the Loot die.” Or for example, one might roll a pair of dice, or they might roll a single die.

In Heroes of Feonora each player will have a set comprised of a (d6), (d8) and (d12) and then share the others, such as the (d20), Bakery dice and of course the Loot die presented here.

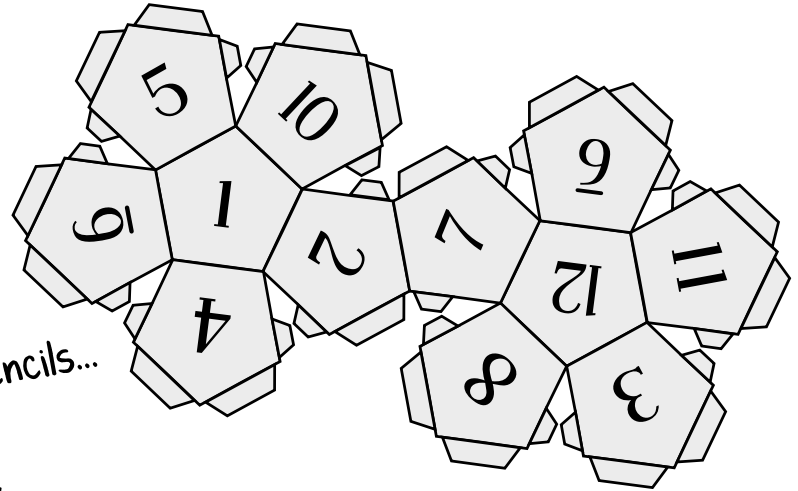

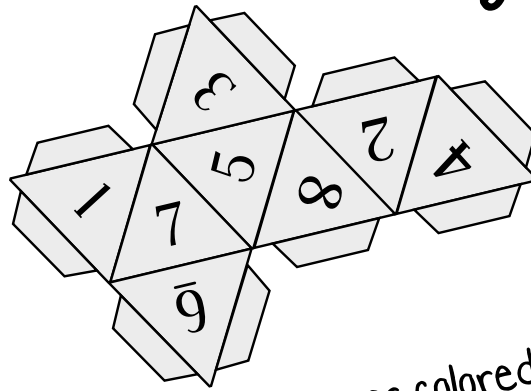

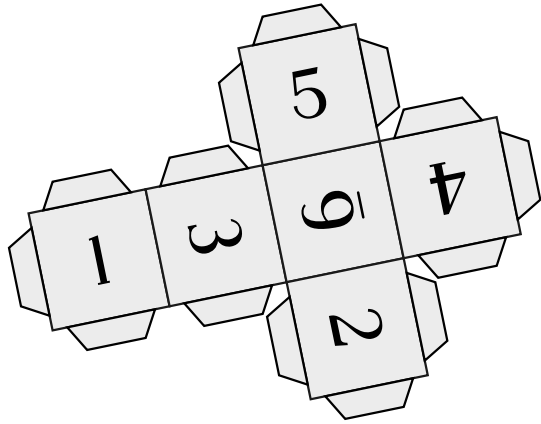

There is a certain pleasure in rolling dice don't you think?

Did you also know... some of the Hauflins have taken to calling them ‘Numbered Wiffle Blocks’. And even though dice are meant to produce random numbers, a few Dwarves have been known to have an uncanny knack for rolling (suspiciously) high numbers when needed. But we don't recommend suggesting the possibility of foul play. Instead, just nod and agree that it's a matter of \*skill in how the dice are thrown... and maybe keep a close eye on those bets.

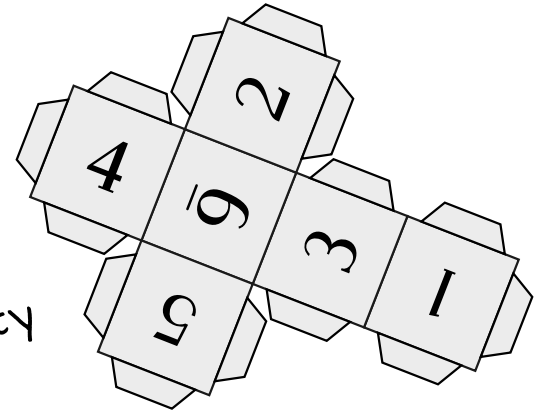

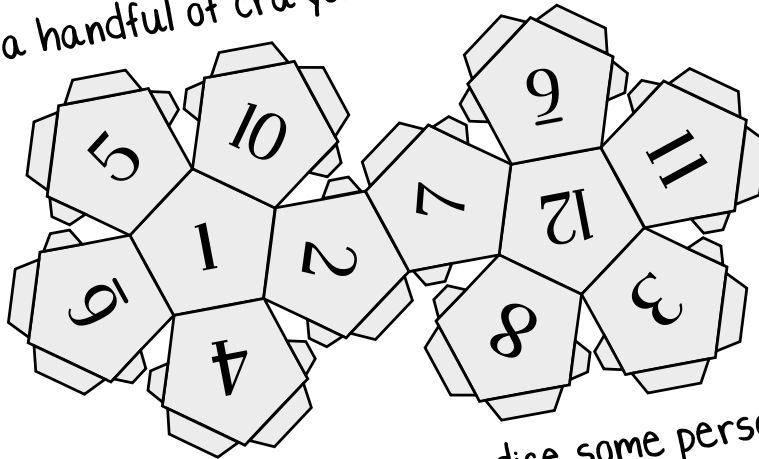

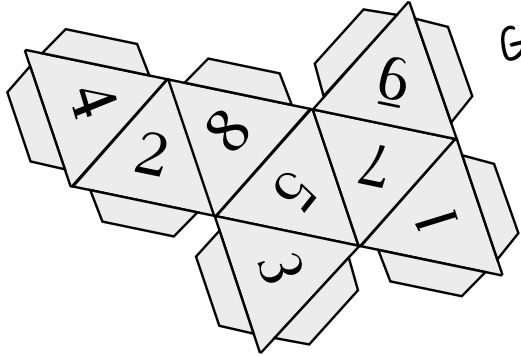

This Loot die here would be classified as a “Truncated Cube”

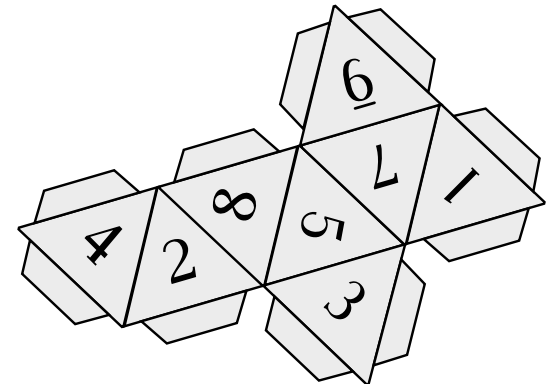

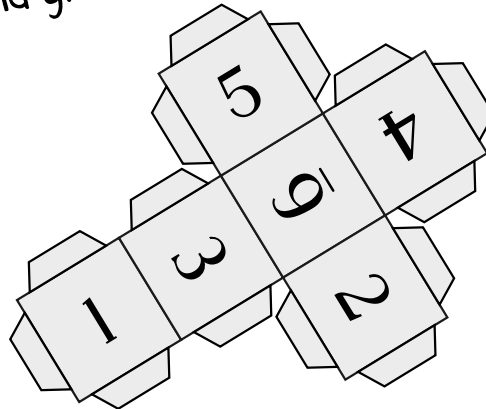

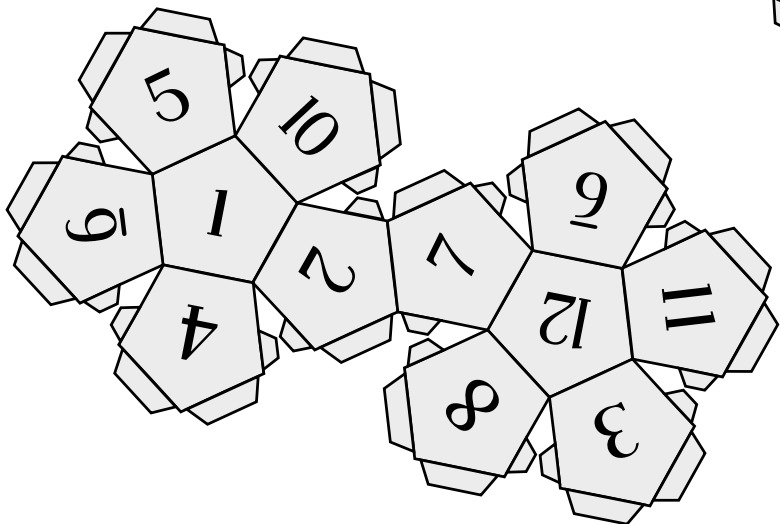

# Uncolored Player Dice

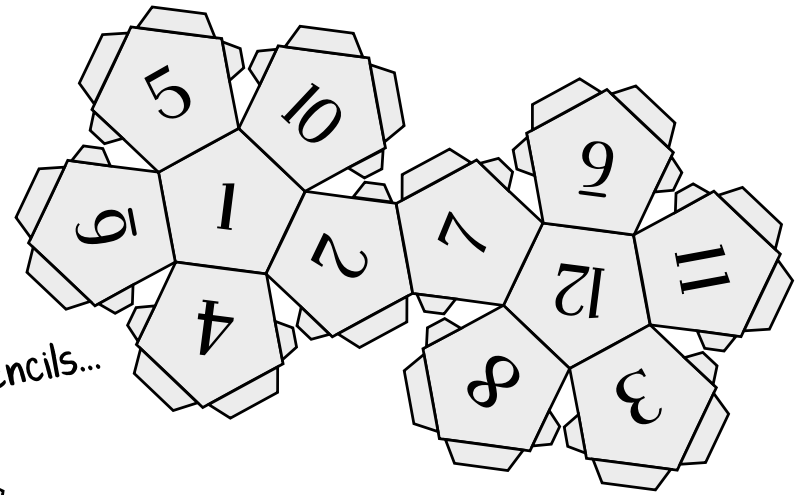

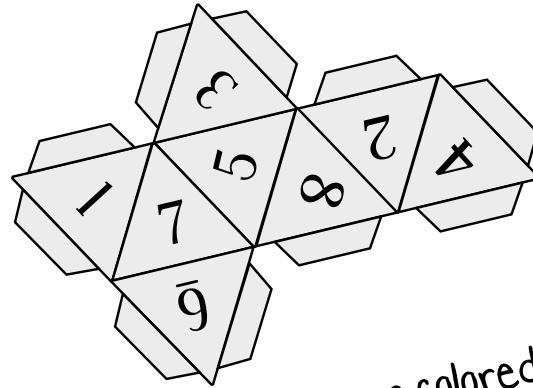

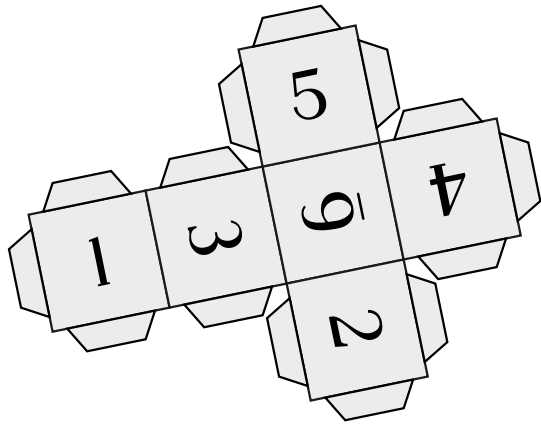

Grab a handful of crayons or colored pencils...

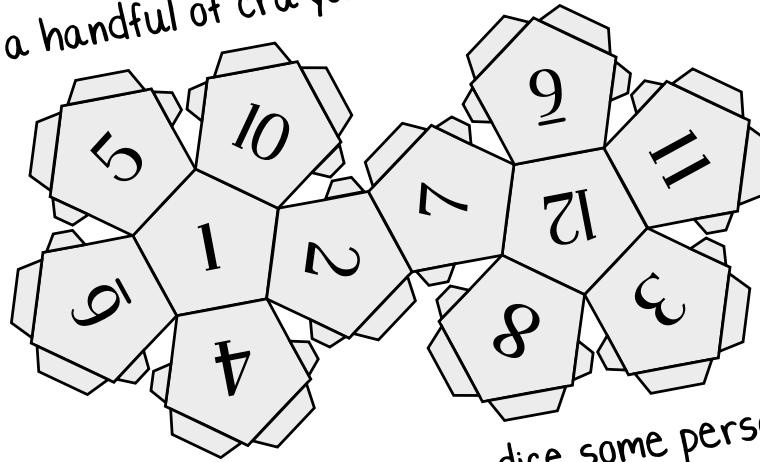

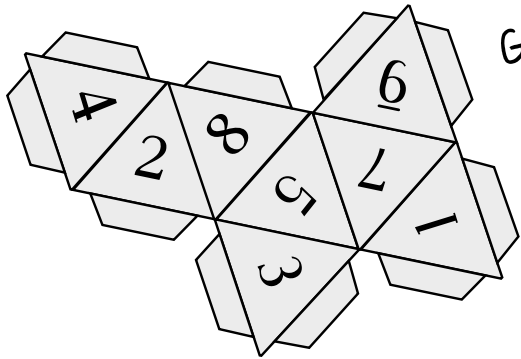

...and give these dice some personality
